

The European Environment Agency keeps a register of all companies, factories, farms etc in the EU/EEA which emit pollutants.

Facilities are required to register, and to

report each emission. Some emissions are “authorised” - ie fall within a permitted quota. Others are recorded as “accidental”.

Data contents – database of EEA/EU/UK-registered polluters, their emissions etc. “Facilities” contains all the factories, farms, etc, “releases” lists all the emissions, including the name of the pollutant involved.
